Hi Ivana,

The post-mortem report came in yesterday. We're mailing it to you, but it is also attached as a pdf so that you would have it for your son's pediatrician appointment.

"Cause of Death: No anatomic or toxicologic cause of death consistent with cardiac arrhythmia"

This means that no abnormalities were found and so a cardiac arrhythmia is the most likely cause. The cardiac gene testing done in the U.S. shows a "variant of uncertain significance in the ANK2 gene." This is what you can discuss with the pediatrician and potentially the referral clinic.

Further, you will notice in the report that the pathologist noted prominent pulmonary edema. This is a finding consistent with a death from cardiac arrhythmia (although it is consistent with other causes of death as well).

If you have any questions, feel free to ask or call.

Regards,

Dave
